EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: in claim 20, lines 15-16 and lines 18-19, phrase *--in response to a measured phase shift--* has been changed to *"in response to said measured phase shift"*.

2. The following is an examiner's statement of reasons for allowance: the prior art of record fails to disclose an apparatus and method thereof comprising elements being configured as recited in claims. Specifically, none of the prior art teaches or fairly suggests, among other things, the following limitations:

- At least one said delay unit of said plurality of serially-coupled delay units providing at least three stages of increasingly finer variable phase adjustment controllable by digital signals as required by claim 1.
- Two parallel delay lines each comprising an input coupled to an input of said delay unit, each said delay line operative to output a signal having a phase; two parallel phase mixers each operative to receive said output signals from said two parallel delay lines, said two phase mixers each operative to output a signal having a phase between said phases of said delay line output signals; and a third phase mixer operative to receive said output signals from said two parallel phase mixers, said third

phase mixer operative to output a third signal having a third phase as required by claim 13.

- Generating a plurality of clock signals each phase-shifted differently relative to said reference clock signal, at least one of said generated phase-shifted clock signals generated via at least three stages of increasingly finer phase adjustment as required by claim 17.
- Adjusting coarsely phase shifts of said plurality of clock signals in response to a measured phase shift; adjusting finely said coarsely adjusted phase shifts of said plurality of clock signals in response to said measured phase shift; and adjusting more finely said finely adjusted phase shifts of said plurality of clock signals in response to said measured phase shift as required by claim 20. And
- Means for outputting a plurality of clock signals phase-shifted relative to said reference clock signal, said means for outputting comprising means for providing at least three stages of increasingly finer phase adjustment for at least one of said plurality of clock signals as required by claims 22 and 23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
